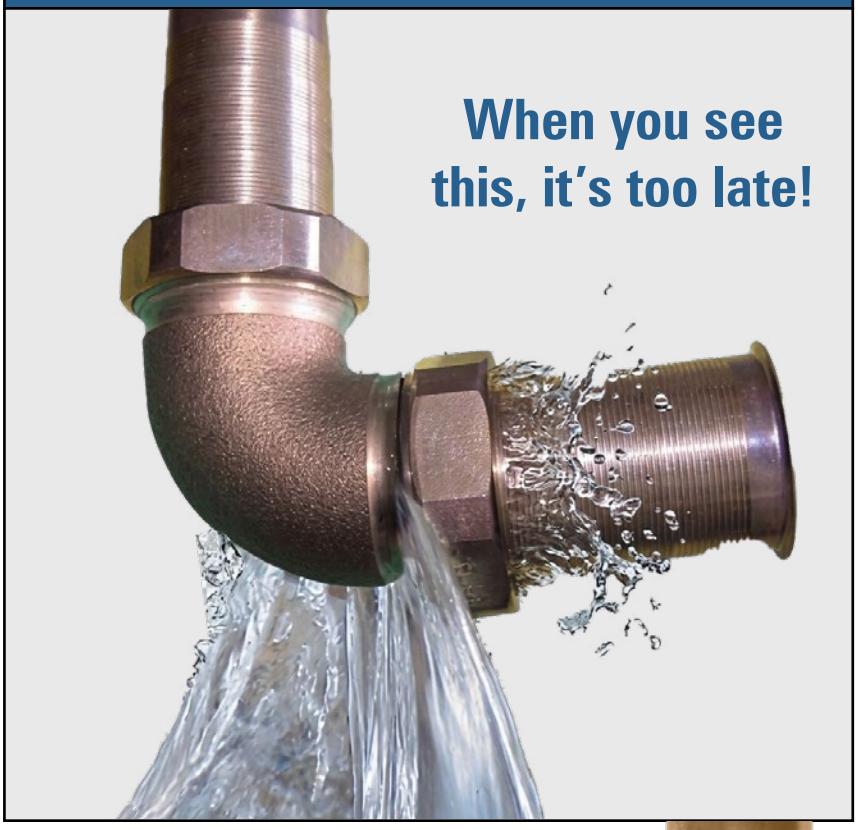
Flush Valve Pipe Stabilizer

Don't Blow It!



- Affordable
- Easy to Install
- Reliable
- Helps Prevent Water Damage

Major flooding is possible, if not inevitable, with most penal toilet fixtures. But Metcraft's new flush valve pipe stabilizer helps to neutralize the effect of high back pressure giving you the flooding protection you need.

Two clamps attach to the vertical and horizontal discharge pipes with a solid connector joining them. This system reduces the vertical and horizontal movement of the flush pipes and helps prevents separation from the slip joint elbow. What's more, flush valve pipe stabilizers are inexpensive and quick to install without any disturbance to existing piping.
